

Littleton Hospital Healing Garden, Littleton, CO

Aerial of Healing Garden

Littleton Hospital identified the need to create a healing garden that could be used by patients, staff and visitors. Lime Green Design was hired by Design Collaborative to develop a design, budget and fund raising materials for the project.

The design was organized around an existing drainage swale. A variety of spaces were sited to the north and south of this spine, including an entry pavilion, medicinal plant garden and a labyrinth. In addition pedestrian circulation between adjacent buildings was accommodated and a variety of looped walks were designed so that patients could exercise comfortably. Collectively the garden elements provide a variety of spaces whether for use by a group or an individual throughout the seasons.

The graphic products depict a compelling vision for the gardens, and through a carefully crafted phasing scheme, will allow the gardens to be developed as funding becomes available.
